

Credit Name:CSE 2140 2nd Language Programming

Assignment Name: Mastery, PackageApplication

Error Log Entry

What error message did you encounter (if any)? My work didnt show if it was too heavy

What unexpected behavior did your program exhibit? Nothing really

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.) I forgot to add ";" at the end of my line

Include a screenshot of specific lines of code.

```
//check if package is both too heavy or large
if (weight > 27 && volume > 100000) {
    System.out.println("Too heavy and too large.");
}
```

How did you fix the issue? I put an ";" to the end of my line of code and it fixed it and showed when i ran the application again

Provide the corrected code or solution using a screenshot.

```
enetr package weight in kg:100
enetr package length in cm:50
enetr package width in cm:50|
enetr package height in cm:50
Too heavy and too large.
```
